TITLE : DOUBLE-FACED ADHESIVE TAPE
 FOR FLOORING MATERIAL FIXATION

ABSTRACT : PROBLEM TO BE SOLVED: To provide a double-faced adhesive taper for flooring material fixation capable of easily and surely perform the work of pasting a flooring material while positioning it accurately, thereby easily realizing the flooring work of detailed finishing, for example, sure grooved-and-tongued joint and accurate meeting of the design of woodgrain, etc., for even an unskilled man while realizing a reduced work time and work load.

SOLUTION: This double-faced adhesive tape for flooring material fixation 41 comprises an adhesive layer having bumps and dips throughout the surface facing the ground surface, and both the concave part of the adhesive layer 36 and the convex part of the adhesive layer 35 comprise an adhesive, and when the flooring material is positioned only the convex part of the adhesive layer 35 is in contact with the ground surface and adhesion area is small, therefore, can be moved easily, and after its position is decided, by pushing the flooring material to the ground surface, both the concave part of the adhesive layer 36 and the convex part of the adhesive layer 35, that is, all the adhesive layer, exert adhesive force and the flooring material is firmly adhered to the ground surface without slippage. Furthermore, this tape also has a releasing liner 34 which keeps the bumps and dips on the adhesive layer intact and the bumps and dips opposite to the ones on the adhesive layer is formed on itself.
